BST Construction from Given Elements

Algorithm

Step 1: Start.

Step 2: Define a node structure containing data, a left pointer, and a right pointer.

Step 3: Initialize the root of the BST as NULL.

Step 4: Insert the elements 14, 15, 4, 9, 7, 18, 3, and 5 into the BST in the given order.

Step 5: Perform Inorder Traversal:

- Traverse the left subtree.
- Visit the root node.
- Traverse the right subtree.

Step 6: Perform Preorder Traversal:

- Visit the root node.
- Traverse the left subtree.
- Traverse the right subtree.

Step 7: Perform Postorder Traversal:

- Traverse the left subtree.
- Traverse the right subtree.
- Visit the root node.

Step 8: Display the results of all three traversals.

Step 9: Stop.
