
Start
Initialize
root = NULL
elements = {14, 15, 4, 9, 7, 18, 3, 5}
i = 0
Is i < 8 ?
Yes
No
Insert elements[i]
into BST
Display BST
after insertion
i = i + 1
Display final BST
Perform Traversals:
1. Inorder (Left, Root, Right)
2. Preorder (Root, Left, Right)
3. Postorder (Left, Right, Root)
Calculate height of BST
Count number of leaf nodes
Input value to search
(key)
Is key
present in BST ?
Yes
No
Display
“Element Found”
Display
“Element Not Found”
Input value to delete
(delKey)
Is delKey
present in BST ?
No
Yes
Display
“Element Not Found”
Delete node using BST deletion rules
• If leaf node → delete directly
• If one child → replace with child
• If two children → replace with
inorder successor and delete successor
Display updated BST
(after deletion)
Stop
