Start
initialize head = NULL, tail = NULL
(front = NULL, rear = NULL)
Set token number = 1001
Display main menu
1. Register patient
2. call next patient
3. Search patient
4. Display All records
5. Display in Reverse
6. Count waiting patient
7. Hospital Dishboard
8. Discharge 9. Exit
Read user choice
(choice)
1] Register patient
2] call next patient
3] Search patient
4] Display Record
5] Display Record in reverse
6] count waiting
7] Hospital dash-board
8] Discharge
9] EXIT

Page No:
Date.
Create new Node insert at end of Double linked List. enqueue to generat queue generate token = Set Statu working
is Queue empty?
yes
yes?
Display No patient waiting
Read token number traverse DDL if found display details else "Patient not found"
if list is empty Display message else traverse from head Display all Patient Details
Read token number if search in list if not found → message if waiting → cannot discharge → if already Discharge
Dequeue from Queue Set Statu = Served Display Patient Details
if list is empty display message else traverse from tail Display all Patient details in reverse
Traverse Queue from front count nodes display total waiting patients
Traverse Doubly linked list count total waiting Served. discharge
is choice = q ?
NO
display main menu
Traverse list of release all memory
Stop
